

Stainless steel sauna products

A standard hand dishwashing detergent, eg Fairy, is suitable for daily cleaning. For stubborn dirt, grease stains, rust spots, a very alkaline cleaning agent (ph 12-13), eg Cif Cream or Universal Stone, works best.

Be sure to protect the skin of your hands with cleaning gloves. Allow the substance to act on the surface of the steel for about 15 minutes, after which the surface is thoroughly rubbed with a kitchen sponge or dishwasher.

Finally, rinse thoroughly with water and dry with a towel or kitchen towel. Do not use scouring powders or steel wool for cleaning, as they will scratch.
